LONG-LIFE chisels for higher work performance

**TERRALAND TN_M, TN_HM,
TN_RT, TO**

KM060410 – Chisel Long Life
70 mm (1 pcs)

**TERRALAND TN_D, TN_HD,
TN_PROFI**

KM060411 – Chisel Long Life
70 mm (1 pcs)

TERRALAND TN, TO

KM060340 – Chisel Long Life
40 mm (1 pcs)

NEW STANDARD CHISELS

- Flat working angle
- Soil profile is undercut
- Soil is kept to upper layers
- Low traction resistance for the tractor

WORN STANDARD CHISELS

- Acute working angle
- Soil is pushed (soil is not undercut as by new chisels)
- Soil is no longer kept in upper layers
- Higher traction resistance
- Higher fuel consumption
- High level of strain on the machine (frames, bearing etc.)
- Reduction of working speed

LONG LIFE CHISELS

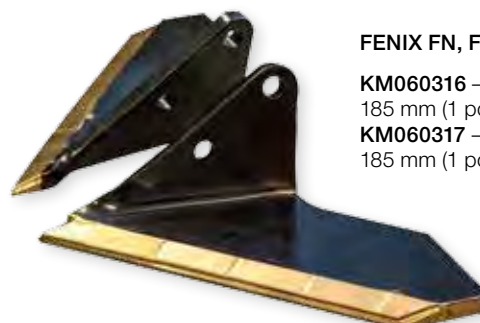

- Permanently flat working angle
- Soil is undercut
- Soil is kept in upper layers
- Constant low traction resistance
- Reduction of fuel consumption
- Reduction of strain on the machine (frames, bearing etc.)
- Higher working performance

Chisels and wings LONG-LIFE

FENIX FN, FO, TERRALAND DO

KM060334 – Chisel Long Life
80 mm (1 pcs)

FENIX FN, FO, TERRALAND DO

KM060316 – Wing Long Life L
185 mm (1 pcs)

KM060317 – Wing Long Life R
185 mm (1 pcs)

“The Long Life chisels last 6 times longer than chisels with weldments in our conditions. Their advantages were confirmed during the dry season and they convinced us to such extent that we no longer use any other chisels on the machine.”

Jiří Mátl, Mechanisation Technician

Zemědělské družstvo Budiškovice
Jindřichův Hradec, Czech Republic

Do not lose time, choose Long Life!

BEDNAR is dedicated to the importance of high quality of the wearable parts. The cost of wearable parts plays an important role throughout the entire life of the soil processing machine.

Higher level of resistency of tips, wings, tines and points significantly lowers not only the cost of wear on parts but also the time required for exchange of working units (chisels, wings, ...). New chisels, wings, tines and points Long Life significantly increase the lifetime of these parts and thus increase the effectiveness of the machines use.

With new Long Life working parts you will achieve quality, time and cost benefits:

- Significantly higher lifetime than traditional standard parts
- Consistent working depth and equal quality of work
- Improved penetration, lower traction power requirement due to the permanently sharp cutting edges
- No need to adjust working width during the wear-out period
- Time and cost savings due to fewer worn parts
- Longer period of use during a season
- Lower costs per hectare.
- Optimal utilisation of tractor power
- Savings on storage space and transport costs

Tines LONG LIFE

Gamma points LONG LIFE

STRIEGEL-PRO PE, PN

01364391 – Tine
Long Life (1pcs)

SWIFTER SN, SO, SE, SM

KM060416 – Gamma point (1 pcs)

“I had a chance to test various chisels for the Terraland, including “Long Life”. These chisels proved to be the best. They lasted 6 times longer than regular chisels. They are necessary for effective farming in the dry season. I recommend using them for their undisputable benefits, such as quality of soil profile processing and less time spent on maintenance.”
