

ALFA DRILL

The ALFA DRILL seeder is for seeding small-seed crops, catch crops, and for applying micro-granular fertiliser and slug pellets. The seeder can be installed on various types of BEDNAR machines for tillage and seeding (compact disc harrows, tine cultivators, subsoilers, seed drills, etc.). The hydraulic driven fan ensures a high output and low running costs, whilst the pressurised hopper guarantees continuous accuracy.

ALFA DRILL

		ALFA 400	ALFA 800
Hopper volume	l	400	800
Filling hole diameter	mm	380 × 530	770 × 530
Filling height**	cm	117	144
Hydraulic oil quantity	l/min	24	24
Total weight*	kg	150	230

* according to the equipment ** in relation to the position on the machine
