JOY OF FARMING

BEDNAR FMT s.r.o. was founded by Mr. Ladislav Bednář in 1997. During its presence on the market, the Company has become a distinguished international manufacturer of agricultural technology and a professional partner to many farmers.

WE OFFER SOLUTIONS FOR EACH ONE OF YOU

We are specialists in the production of agricultural technology for soil cultivation, seeding, inter-row cultivation, mulching, fertilization, and crop residue management. From the very beginning, we have been focusing on the development and production of wide machines; however, our comprehensive machine portfolio enables us to offer a suitable technological line for any farming conditions and area size. You can find BEDNAR machines in more than 38 countries of the world, working on various climatic and soil conditions at the full satisfaction of their owners.

WE GROW TOGETHER WITH YOU

BEDNAR agricultural machinery is manufactured in a production plant in Rychnov nad Kněžnou. We started manufacturing our machines in the plant on an area of 3,932 m² in 2006. The production plant was considerably expanded in 2012 when the production plant for the powder coating workshop was built. Two years later, we expanded the production and storage spaces to 14,061 m². Laying down the foundation stone in December 2018 for the construction of a new, two-storey production hall, was a fundamental step for our Company. In 2020, the new production hall was put into operation and the line assembly of machines started. The production and storage spaces were expanded to 30,492 m².

The highest investment in the history of the Company allowed us to flexibly respond to the increasing demand for BEDNAR machines related to active launching of products on new markets and building a stable distribution network.

WE DEVELOP NEW MACHINES BASED ON OPERATING TRIALS AND IN COOPERATION WITH OUR CUSTOMERS

We are distinguished specialists in the field of deep soil cultivation. We have been promoting this solution for many years, and we have been testing its positive effect on soil fertility and the yield in the grown crops in cooperation with scientific organizations and leading agricultural businesses.

Together with deep loosening, we are also intensely studying the method of profile fertilization, based on precise, and often variable application of attractive fertilizers into the soil environment, in relation to the soil maps, either on the whole area, or into the processed strips of soil under the plant roots.

ONLY ORIGINAL SPARE PARTS CAN ENSURE TROUBLEFREE FUNCTION OF YOUR MACHINE

The individual parts of BEDNAR machines have been thought out to the very last detail so that together they form a unit that guarantees 100% quality. The BEDNAR consumable spare parts (sweeps, chisels, discs, Scrapers, rods, wings etc.) are made of quality material, providing excellent work.

By purchasing original BEDNAR parts, you will get a top quality part and moreover, you can rest assured that the part corresponds with the one you need for your specific machine. You will always find the required number of parts in our central warehouse and in the stock of our authorised sales partners; we are committed to timely deliveries whenever needed.

MISSION

Our mission is to be close by and to offer solutions that increase your business profit. That is why we keep in close contact with you, our customers, agricultural universities and professional institutions when developing new machines and technologies.

When manufacturing BEDNAR machines, we pay attention to the high quality of the individual materials, used parts and the final inspection of machines, which receive a high and long-lasting added value thanks to our unique know-how and production technology.

We respect the principles of sustainable development of our planet to preserve values for future generations. We implement technologies that increase plant production and thus provide nourishment to the fast-growing global population.

VISION

We will continue to flexibly respond to legislative changes in handling of chemical plant protection products and the ongoing climate change. We will focus on developing machines for mechanical weeding, targeted fertilization, or for precise establishment of arable crops and catch crop, including their combinations. We strive to offer our products and technologies to an increasing number of farmers. We concentrate on finding new business partners, building a stable distribution network, and providing high-quality sale and after-sale services. The control and settings of the necessary parameters for high quality of work performed by BEDNAR machines will be more based on the simplicity of pressing a single button. Data digitalization and their meaningful use will be gradually reflected in most of the machines we manufacture.

FACTS ABOUT US

- We employ over **550 people**.
- We export into **39 countries** around the world.
- In 2022, we manufactured **2,200 machines**.
- **The sales export is 93%.**
- In 2022, we reached **a turnover over 148 million EUR** for the first time in the history of our Company.

VALUES WE BUILD ON

INNOVATIVE TECHNOLOGIES

“We are a professional partner and advisor to farmers, and we bring new technological solutions to your business.”

HIGH PRODUCTIVITY

“We are a leader in the field with more than twenty years of experience in the development and production of wide machines for soil cultivation and seeding.”

AGRONOMIC KNOW- HOW

“We are farmers who respect the tradition of farming, and we respond to modern agricultural trends and procedures.”

EASY MACHINE OPERATION

“We focus on easy machine control and intuitive operation, and it is something to be considered as early as an idea of a newly developed machine crosses our mind.”

LONG LIFE CHISEL

The thickness of the Long Life material on the bottom side of the chisel is less than approx. 2 mm; the Long Life plates on the top surface of the chisel do not cover the whole edge of the chisel.

Don't lose time with replacements, choose LONG LIFE!

BEDNAR is well aware of the importance of the quality of consumable parts. The cost of consumable parts plays an important role in the operation of soil cultivators.

A higher resistance of chisels, wings, rods and tips considerably reduces the cost of consumable parts as well as time spent by replacing the individual working parts.

New LONG LIFE chisels, wings, rods and tips have a considerably longer service life and thus increase the efficiency of the machine.

New LONG LIFE working parts provide advantages in terms of quality, time and cost:

- Up to 10 times longer service life than the standard version.
- A consistent working depth and quality of work.
- Improved recessing, lower demands on the pulling force thanks to the permanently sharp edges.
- Almost no need to adjust the working depth according to the wear.
- Saved time and cost of replacing the parts.
- Extended period of use of machines in the season.
- Lower cost of chisels / wings / rods / tips per hectare.
- Optimal use of tractor power.
- Savings in storage spaces and cost of transport.

LONG LIFE chisel after
processing 700 ha of soil

- A flat working angle
- Soil profile undercutting
- Bringing soil up
- Low traction resistance

- A sharp working angle
- Soil pushed forward, the chisels do not undercut as well as new ones
- High traction resistance
- Increased fuel consumption
- Excessive load on the machine frame and bearings
- Lower work speed

- A permanently sharp working angle
- Soil profile undercutting
- Soil continuously brought up
- Continuously low traction resistance
- Reduced fuel consumption
- Ideal load on the machine frame and bearings
- Higher output

“The LONG LIFE chisels last six times longer in our conditions than chisels with weld deposits. They are especially useful in the dry season and they work so well that we no longer use any other chisels on the machine.”

"I had a chance to test various chisels for the TERRALAND, including LONG LIFE. These chisels proved to be the best. They lasted 6 times longer than regular chisels. They are necessary for effective farming in the dry season. I recommend using them for their undisputable benefits, such as quality of soil profile processing and less time spent on maintenance."

TIME FOR REPLACEMENT

CHISELS

When the chisel length is reduced by more than 35 mm.

LONG LIFE CHISELS

When the thickness of the tip is reduced to less than 2 mm. Long Life plates must be visible along the length of the chisel to ensure its function.

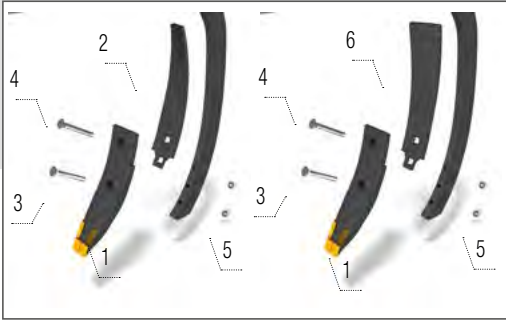

LONG LIFE WINGS

The loss of the wing edge exceeds 1.5 cm of its width or the total wing width is reduced.

SCRAPER

The gap between the scraper and the roller must not exceed 1 cm at maximum shift.

PACKERS AND ROLLERS

JOY
OF FARMING

Tube Packer
A traditional packer with massive steel rods that provide standard crumbling effect.

Steel Ring Packer
A packer with massive steel parts for superb compaction suitable for all soil types.

Rubber Packer
A packer from hard natural rubber suitable for all soil conditions with very low tack.

Spring Packer
The packer has an excellent crumbling effect and reduces the risk of blockage for soil with high moisture content.

Double Presspack Packer
The PRESSPACK is a heavy steel packer that consists of two rows of steel rings. This type of packer is suitable for heavy soils. It offers a great crumbling and compacting effect.

V-ring Packer
A heavy steel packer for all soil types for intensive crumbling and compaction of the soil.

U-ring Packer
A steel packer for all soil types with quality crumbling and low stickiness thanks to the "U" rim profile.

Cutpack Packer
A heavy steel packer with high cutting capability suitable for heavy soils.

Double Roller
An ideal roller for quality two-step cultivation of medium and light soils in drier conditions.
